

SWITCH COMMUNICATIONS PUSHES BUTTON ON NEW WEBSITE

Switch Communications, one of the UK's leading independent installers of integrated communications solutions has launched a new website (www.switchcomms.co.uk). The site provides easy access to the company's complete range of voice and data systems and showcases its ability to deliver seamless, centrally managed projects that complete on time and to budget.

The new site reflects Switch Communications' rich heritage as an Alcatel partner. It also highlights the InPurple family of secure IP-based network products with guaranteed Quality of Service – each of which is brought to market by SwitchIP, Switch Communications' sister company. This combination has enabled Switch Communications to provide complete comms installations for a range of companies including Knight Frank, Calumet, The Perfume Shop and JVC, as well as organisations such as Uxbridge College and Brighton Dome.

It also highlights other services that distinguish Switch Communications from its competitors – helping to make it more than a straightforward comms reseller. These services include Switch Networks, which offers cost effective line rental and call package solutions and, through its status as a BT Wholesale Partner, the ability to provide direct line rental to customers. The company can also offer bespoke VPN monitoring services and centralised network security architecture as well as tailored consulting services, 24x7 customer support and post-installation training.

Andrew Terry, joint Managing Director of Switch Communications, concludes: "The new-look website highlights all of the company's capabilities, making it much easier and quicker for potential customers to see the full scope of our offering. The development of the website is key to Switch Communications' long term business strategy and positions us firmly as a major player in the comms space."
